Work Experience

- freelancer web developer, Software Development, May 2020 ~ Present

I am working before 6 months. Below are link to some of my projects

1. LastMinuteLabour

There are three types of user they are user, restaurent, delivery. Search engine for searching foods, restaurent's name, cuisine. There has payment method. Restaurent's owner can create an account then they add their food, category with image and they get order of user. They can accept or decline order. Delivery user will get there order for deliver. Below is that project link

<https://github.com/ssamiran472/LastMinutLabour>

2. cbt

This is a tow project for car repairing, one city to another city car transfer. User can fill up their form with the help of google api. Here User model is implemented and has users order system.

<https://github.com/ssamiran472/cbt>

3. Facerecognition

Here employees register with their details and their photo that was capture by webcam. After completing their registration there has a reconize page where employees will be recognized and get their name. After recognizing there has a csv file where added their attendance time of that day. Below is that link

<https://github.com/ssamiran472/facerecognition>

4. Pdf handler

This project has a method where in front-end a pdf file will be sent to back-end. the file will be convert to base64 format from front-end and in back-end that base64 data will be convert to pdf file and store it in media folder. Next all the uploaded file name will be listed. when click on that file name then from backend pdf file data will be convert to base64 format then send to font-end. This is that project link

<https://github.com/ssamiran472/pdfhandeler>

5. DjangoDevelopment

In this project There has odoo data base on server. I fetch data from there and show it to templates and with the post method I store data to the data base. There has a auto mailing with crone job. This is the project link

<https://github.com/ssamiran472/DjangoDevelopment.git>

6.JwtAuthentication

This is a small project. Here has a todo app. Where has a authentication system. Here use a JWTAuthentication system. The project is complete with reactjs and Django rest framework. Here is the link

<https://github.com/ssamiran472/todo>

7.cloths-shop

This is a simple projects of model-view-template. There has multiple model and some templates. There I use a

custom template tags and filter. This is the project link

<https://github.com/ssamiran472/cloths-shop>

8. HotelProject

This is a resort hotel project. This project is build reactjs and django rest framework. All the data is fetched by django rest framework and it is use on front-end with reactjs. Here is the link of the project

<https://github.com/ssamiran472/hotelProject>

9. Tinder Clone App

In this project I build a website with firebase and reactjs.

Here is the link of the project

github :- <https://github.com/ssamiran472/tinderclone>

host link :- <https://tinderclone-60fcd.web.app/>
